YOUR PROJECT PARTNER

Equipped with 39 single and two-material electric and hydraulic presses, RGF Plastique can assist you with the design, prototyping and production of parts manufactured in medium and large production runs.

Our design office is equipped with CAD and rheology tools. We monitor the production of plastic parts from design to delivery, including management of the subcontracting chain. RGF Plastique has recognised expertise in the production of robotic assembly lines.

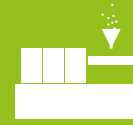

RGF Plastique develops a range of clean products designed primarily for microbiological analysis, and some of these products are certified «in vitro medical devices».
